

MEMO Ssh-

Les commande ssh se trouve dans /etc/bin

ssh
ssh-keygen
ssh-copy-id
ssh-agent
ssh-add
ssh-argv0
ssh-keyscan

mise en place de passphrase

```
ssh-keygen -lvf ssh_host_ed25519_key.pub  
ssh-keygen -t rsa -b 1024 -f /home/user/.ssh/id_rsa  
ssh-copy-id -i /home/user/.ssh/id_rsa user@192.168.44.132  
ssh-copy-id -p 2020 -i /root/.ssh/uc_rsa.pub user@192.168.44.48  
ssh -i /home/user/.ssh/id_rsa.pub user@192.168.44.132  
ssh -p 2020 -i /root/.ssh/uc_rsa user@192.168.44.48  
ssh-keygen -p -f /root/.ssh/id_rsa  
scp -P 2020 file1 user@192.168.44.48:
```

mise en place de l'agent ssh

```
exec ssh-agent bash  
ssh-add sirs_ecdsa  
ssh-add -l  
ssh-add -d sirs_ecdsa  
ssh-add -t 2d sirs_ecdsa  
ssh -i sirs_ecdsa user@192.168.44.135
```

mise en place de la double authentication

- 1- apt install libpam-google-authenticator
#Double Authentication Ssh
auth required pam_google_authenticator.so

- 2- Dans le fichier /etc/ssh/sshd_config
Remplacez no par yes dans :
KbdInteractiveAuthentication yes
ChallengeResponseAuthentication yes

ChallengeResponseAuthentication yes

```
# Change to yes to enable challenge-response passwords (beware issues with  
# some PAM modules and threads)  
ChallengeResponseAuthentication yes
```

```
# AuthenticationMethods publickey,password publickey,keyboard-interactive
```

- 3- google-authenticator

Fichier .config

```
host sshserver  
  user userserver  
  port 22  
  identityfile /home/userserver/uc_rsa
```
